

Surveillance of Babesiosis in the US

New study summarizes human surveillance data from 2011-2018 in the United States for *Babesia* infections reported to the Centers for Disease Control and Prevention (CDC) through the National Notifiable Diseases Surveillance System (NNDSS). Data shows an increasing trend of reported *Babesia* cases (14,159 total) during this time period, with white men in the middle and elderly age groups most affected. Data also shows that the New England and the Mid-Atlantic regions of the US reported highest numbers of *Babesia* cases.
