

2010 Lyme Case Pie Graph: Northeast vs US

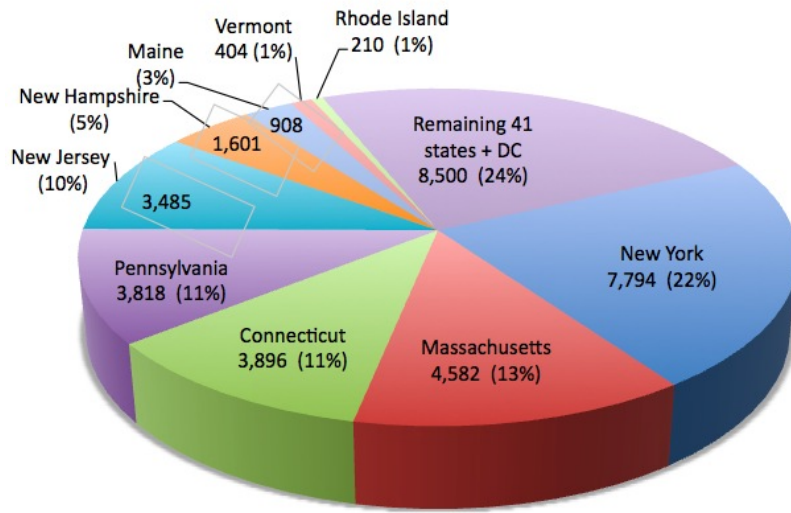

Lyme disease is not just found in the Northeast. In 2010, the LDA did an analysis showing 34% of all CDC reported Lyme cases came from states other than states in the Northeast. In 2008, the LDA did a similar analysis which showed that 24% of all CDC reported Lyme cases came from states other than states in the Northeast. The two year period shows an increase of 10% in the number of reported cases found outside the Northeast.
